Dear Mr Parrott,

The reprocessing facility outside West Valley N.Y. needs to be cleaned up completely. No amount of radiation, High level, low level - dirt, water, clothes building material burried waste, experimental, new technology containment or barrier trenches, any thing, should remain. It should all be removed and it should continue to be carried out using the safetest and most advanced scientific methods - the expert know. No cost cutting or less expensive ideas should be used here.

West Valley is centered in prime, growing, agricultural land & the right amount of rain, sun - the right temperatures needed to sustain life. The area is also Our Worlds largest, natural fresh water system and a very densly populated area including large cities - Pittsburg - Buffalo, Cleveland - Rochester

Any radiation exposure left behind

NIMSSOIPublic

is unacceptable even 25 millions.
The Federal Government needs to
complete this clean up - and monitor
this area forever - - - - - -

We know radiation exposure is fatal
to our Human tissue. We're told its no
more exposure than normal occurring
radiation - Well we cannot do much
about our normal occurring radiation
can we. It's like the air we breathe -
But this exposure is man made !!
Clean it up completely!

Sincerely
Elizabeth Kepper
116 N 5th St.
Allegany N.Y. 14706

an added remark -
Congress should authorize an act to
immediately fund and facilitate and fund
a "dump" (for that's what it will be - for those
anyone has to have it) for all this terrible material
