Dear Jack Parratt, Proj. Scientist

Please dig up, package & store nuclear waste at West Valley, NY. Exhumation of these burial grounds are a must. It would provide more jobs; also the costs to guard the site for a long period of time would be much more costly.

* Institutional Control would be very expensive & depends on future funding.
* The high level waste left in the tank should not be reclassified as incidental waste.
* The proposed doses in case institutional control fails should be more protective.
* Calculations of potential doses must include exposure from the entire site including both burial grounds.

Exhumation of the burial grounds is a must.

Dennis Dick
