Feb. 18. 2000

Dept of Energy, Washington D.C.

DOCKET NUMBER PROPOSED RULE PR 20 (64FR35090)

Dear Secretary Richardson

I am a very committed recycler from back in the early 70's. But what the NRC and DOE are trying to foist on Americans is not recycling as usually understood: postconsumer paper, creative ways of reusing glass and other objects in safe ways.

In decommissioning the Oak Ridge uranium enrichment plant the DOE was ready to sell tons of contaminated nickel until demands to stop were obeyed "for now." Radioactive steel and copper decontaminated by an "experimental" process were next, posing some public health risk.

DS10

Your department and NRC are proud to join the USDA and FDA in treating citizens like "guinea pigs" without telling them.

You know the details of the NRC contract with a corporation that would provide the "technical assistance support for clearance of material and equipment;" it sounds almost like a friendly neighborhood yard sale! But its about teaching the NRC how to use contaminated particles of radioactive material to manufacture products like your toothbrush or baby stroller.

How clever and malignant.

The present NRC is a partner

of the nuclear industry in regulating, supervising and advertising, with greed and corruption ruling every aspect from selling older reactors to decommissioning

Your new slogan should be "strip it out, disguise it, and make a buck." And I sometimes think you and the defense industry are ruled by a Plutonian death wish for our earth.

America is waking up, we want no consumer products that are contaminated to enter our market place.

I know attempts began long before you joined this Department. We are relying on your action to prevent Americans and the world from potentially deadly

action from taking over.
Thanks for reading this.
