5/19/99

I spoke w/ Julie Gregory today.

We discussed:

- L-EDEWBODY vs. TEDE
- mapping of gaussian plume onto sectors
- understanding impact of 4 rem relocation criteria in chrono

She said "L-EDEWBODY" and "TEDE" are the same.

"L is intended to indicate that this is a long-term dose and internal exposures are for a [50] year period."
