1/7/00

Today at 11:40 a.m., I called D. Powers.
I asked him where to look regarding Canadian work under air conditions.
He said:

① References 28, 29, and 30 in NUREG/CR-6218

② Series of publications by Cox in Nuclear Technology over the last 5 years.

③ He has these references at home. (unfortunately).

④ VI-7 experiment at ORNL did not use enough oxygen.

⑤ Canadian fuel cladding is only 1/3 as thick as U.S. fuel cladding.
