Common Good
Quality of Life
Regulated Activities
Non-Regulated Activities
Output
1

Regulation:

To *prescribe* or *control* by regulations.

Webster's Dictionary

2

The NRC is upgrading the *prescribing* and the *controlling*.

3

Study 1. Everyone that does not receive medical attention eventually dies.

Recommendation: Establish a plan to require that everyone receives mandatory health care at significantly increased frequency.

4

Study 2. Everyone that receives medical attention eventually dies.

Recommendation: Establish a plan to require that all health care systems be eliminated

5

Recommendations:

Forgot to address the minor issue of quality of life.

The substantial cost of the two plans were comparable:
Plan 1: more health care
Plan 2: more lawyers

6

"It is not possible, generically, to rule out the possibility of death."

7

Risk-informed regulation is an integral, increasingly quantitative approach to regulatory decision-making that incorporates deterministic, experiential and probabilistic components to focus on issues important to safety, which avoids unnecessary burdens to society.

8
