Dear NRC:

We are most distressed and appalled that radioactive waste from 50 years of atomic weapons and nuclear power is entering our environment, homes and products. The NRC must not legalize the release and clearance of radioactive materials from licensed regulated control into raw materials, building supplies and items with which we come into daily contact. Atomic waste must NEVER be recycled or re used. For the sake of public health and safety, it must be treated as the poisonous contaminant it is, and isolated from the environment for its full hazardous life. We must not expose ourselves to anymore CANCER risk. We hope this matter will receive very serious consideration and efforts will be made toward International prohibition on radioactive "release". Thank you for your attention.

Sincerely,
Mrs. Lillian Bauch & family
