To Whom It May Concern:

We, the undersigned, are strongly opposed to "G.A.L.L." or any other generic licensing extension for aging nuclear reactors. Planned decommissioning of old nuclear facilities must be adhered to in order to ensure the future safety and well-being of the American public, our communities and our environmental surroundings. Regardless of pressure from industry groups, we urge the NRC to place primary importance on public health, not potential financial gain. Please enter this letter into the official record of public comment.
