General Comments on Oct 6, 2001 report.

1. Use consistent Units

2. Use consistent terminology.

3. Do not separate numbers from units on different lines.

4. Do not separate hyphens unless a compound word. See pp 2-8.

5. Center Figure & Table Titles

6. Be careful how many acronyms are used in the document.

7. Be definite in statements ~~dos~~ do not say things like "probably", "It was thought" etc.

8. Use "plane of symmetry"

9. Use general plane descriptions

10. Do we need larger figures where damage is shown?

11. Provide clear criteria for "failure" for every analysis where it is ~~important~~ proper to do so. Put this criterian in an easy to find location in each section.

12. Where possible state the weak point in the cask for each evaluation
