J Staudenmeier said:

(1) some PWR spent fuel pools can hold as much as 10 cores

(2) some BWR spent fuel pools can hold as much as 5 cores

(3) After a spent fuel pool fills up, the oldest fuel can be put in dry cask storage.

The fuel pool that C. Boyd is modeling (1) looks like a filled-up GG sfp and (2) has the GG sfp dimensions.

(4) His recollection is that

(5) See webpage "www.nrc.gov/OPA/drycask/sfdata.htm" for some important info on sfp's.
