4/5/00

SFP

Issues from today's SFP mtg w/ ACRS:

1. A couple of years ago, there was a joint European study of MACCS uncertainties/expert elicitation. Need to get the results of this work into MACCS. (D. Powers)

2. RG 1.174 is based on the S.T. from a steam environment and the prompt fatalities from that S.T. (T. Kress)

3. For Chernobyl, the ruthenium found in the environment was in metallic form. (D. Powers)

(Can get and read transcript from today's ACRS meeting.)
