(1) Sam Collins 6/4/99

Put forward findings saying where we are + what comes next.

Made decisions in past
plant-spec
continuing to make decisions
no need to change yet based on prelim.

Up front Context of where we are in time in process (talk up front on where we are).

"Not as straight forward as previously thought"

"Our review did not limit ourselves to seismic"

"Too early in process to make decisions"

Still in the information arena, need to apply it to the process in time and appropriately.

"Eventually applied to our processes: backfit, at decomm plants, oper Rx, relief, !"

If we find anything so safety significant, we will enter the regulatory process.

At beginning
+ at end, "What does all this mean?"
where are we in the process?
