Impact of Op Units

Millstone → None, each unit is separate

Songs? Case by case.

Dresden → None units are separate.

BRP → None

GEORGE:

- Mult-unit issue only.
- Units must have shared spaces, systems to be a concern.
  ∴ MP-1 is NOT a concern: NO SHARED SPACES.
- Loss of coolant must create an environment that causes a loss of functionality of ECCS systems (or other protective systems) in the operating units. The components must be close enough to the pool to be affected by the ~~[illegible]~~ harsh environment
- I can't recall the staff ever considering this issue. A quick look at 1353 did not reveal any evaluations by the staff that were helpful.

  Other ~~[illegible]~~ NUREGs may have covered this issue, maybe RES knows of some.

9/30

- I think we can conclude that only a very few plants fit the risk profile (Multi unit, shared systems/spaces where 1 unit is decommissioned and the other is operating)
