Hello,

I hope you are going to take the licensing of the proposed Yucca Mountain Nuclear Waste Dump Site very seriously and are not going to just rubber stamp the government's decision. Your descendants are counting on you to make the decision, and so is the rest of the World.

I admit that I have an ulterior

WM-11
NMSS07

motive, I oppose the construction of any kind of waste disposal site for many reasons, but the three most important are as follows:

First is the transportation. All this waste creates a rolling timebomb that just begs terrorist to come and play. Second is human error. If we are so perfect than why do we need the Price Anderson Act? And the third, and most important, is that it will result in building more nuclear reactors, power plants, and nuclear weapons, because now they have a place to dispose of all their waste and mistakes and pass their responsibility onto the state of Nevada and their citizens. You live their. I hope you can understand how the rest of the folks in your state feel.

Why can't we use all this nuclear

proliferation money to research alternative energy sources instead?

Thank you for listening,

Dave Ayotte
