SUMMARY *(Continue on Page 2)*

NRC Participants: Eric Benner, Shana Helton

Purpose of call: Discuss regulatory options for amending certificate of compliance (CoC) 72-1031 to reduce the testing requirements of the Boral neutron absorber.

Discussion: The NRC indicated that if NAC submitted an amendment that solely addressed the Boral testing requirements, the schedule would be commensurate with a priority 4, moederate complexity case: 6.4 months of technical review (assuming that the staff had no need to request additional information), followed by 6 months of rulemaking. NAC thanked the NRC for the information and stated that they would communicate their plans for an amendment to CoC 72-1031 after making their decision.

END OF CONVERSATION RECORD - NO CONTINUATION ON PAGE 2.
