Appendix A – Description of Davis-Besse Monte Carlo Damage-State Code

The Davis-Besse Monte Carlo Damage-State computer code was developed for this study to provide estimates of the LOCA probabilities as a function of time throughout the estimated history of the wastage cavity. Figure A1 presents a flowchart of the basic structure of the code, where in Step MC1 the case conditions are setup by the user through a sequence of prompts as shown in Figs. A2 upon startup of the code.
