Indian Pt

October 31, 1980

NRR

Dear Chairman Ahearne,

I'm writing to urge you and the Nuclear Regulatory Commission to keep the Indian Pt. II Plant closed. I am convinced that the use of nuclear power is much too risky and should never have been plan "A". There are other forms of energy such as solar and wind power which should be developed.

It is ridiculous to think that these plants could be operating when there is no sure way to dispose of the waste and the radio active elements used have half lives of hundreds of thousands of years.

Please listen to those of us who are pleading with you to realize that we cannot keep utilizing substances which cannot be returned to the life chain and not have them destroy us.

I only pray that God will enlighten the Nuclear Regulatory Commission.

Sincerely,

Mrs. Diane Otten
