SHEET 4 OF 6

NOTES:

The contours shown heron were generated from a digital terrain model produced from a light detection and ranging (lidar) survey. In areas of acute slopes, swamps and surfaces that limit accurate laser returns contours are shown dashed and should be considered approximate.

The LIDAR survey data was collected on April 12, 2006.

The Orthophoto was produced from aerial photography captured with a Leica RC30 mapping camera on May 24, 2005.
