

**Nuclear Education Program
Faculty Development Grant Program**

Executive Summary:

Support under the NRC Faculty Development Grant Program is requested for one probationary, tenure-track faculty member in the Health Sciences at Purdue University. A second assistant professor will be hired at the school of nuclear engineering in this fiscal year and can participate in this grant as well upon coming on board. The current assistant professor began her faculty career in Fall of 2009. She is a talented, dedicated individual who is particularly enthusiastic about teaching and have already made contributions to Health Physics programs. It is essential that we retain and attract these highly qualified faculty members. This proposal outlines a development program for new faculty members, the process by which these two faculty members was/will be selected, and plans for managing and assessing the effectiveness of the development program.
