

NRC Faculty Development Grant Program

Support under the NRC Faculty Development Grant Program is requested for two probationary, tenure-track faculty members in the School of Nuclear Engineering at Purdue University. Both professors began their faculty careers in the Fall of 2007. Both came to Purdue from national laboratories where they have successfully written proposals, managed research programs, and published results of their work. They are talented, dedicated individuals who are particularly enthusiastic about teaching and have already made contributions to our Nuclear Engineering program. It is essential that we retain these highly-qualified faculty members. This proposal outlines a development program for new faculty members, the process by which the two faculty members were selected, and plans for managing and assessing the effectiveness of the development program.
