Subject: RE: Tracer Test and Well Data Request

Hi Tom,
We are currently working on request. Pursuant to tracer plume plots, we put the most current plots, including infiltration data on ftp site last Tue (4/10). We are working on the latest data set that we just got from the lab. We have also put the latest plume maps(average [ ]s - the maps we just developed for John White's meetings yesterday)on the ftp site today.

Subject: Tracer Test and Well Data Request

Jim:

As we discussed, I spoke to John Williams, USGS this afternoon to prepare for our May 9th meeting at IPEC. John checked the GZA Website and saw that the files which are in ".pdf" format. In order to do his analyses, he needs the data in the original ".wlc" file format. Please ask GZA to post those original .wlc formatted files on their Website for him to access.

Separately, John would also appreciate obtaining information on drawdown, flow rates, temperature and water level changes in wells surrounding those wells that were drilled and subsequently pumped which appeared to show hydraulic connections with those surrounding wells.

I would like to see the tracer breakthrough profiles for the wells we mentioned in our earlier request:

RW-1, MW-30, 31, 32, 33, 34, 35, 36, 37, 42, 49, 50, 53, 54, 55, 57, 63, 66 and MW-111

To facilitate our understanding of this data, I propose a teleconference on April 25th with John Williams, Dave Winslow, Matt Barvenik and myself to discuss technical details on the data (but not to interpret at this time until we have analyzed). I think the May 9th meeting will be greatly enhanced if we could first discuss any questions about their posted data. You may wish to invite the NYSDEC scientists to join us, as well.

Thanks for your assistance .....Tom
