Subject: Event Number 51391 at Fermi

Mr. Gurdziel,

This e-mail is a follow-up to your e-mail to the NRC on Tuesday morning, September 15, regarding the scram of Fermi late Sunday night. On Wednesday, September 16, Viktoria Mitlyng, a senior public affairs officer in Region III, discussed with you the scram and the NRC response. As a result, I repeat some of the information she had provided you. The NRC response included the resident inspector arriving onsite very early Monday morning to review the scram and the status of the reactor. He then continued throughout the week to monitor reactor status and assess the plant's investigation of the scram and repair activities. Regarding your concern about the plant cooling down, we did not identify any requirement for the plant to cool down sooner. The resident inspector and I will continue to review the scram and take whatever enforcement action is warranted. If you have an additional questions or concerns, please contact Ms. Mitlyng in the Region III office ((630) 829-9662) or me at the NRC Resident Inspector Office at Fermi ((734) 586-2798).

Thomas Briley

Thomas Briley
Senior Resident Inspector (Acting), Fermi Power Plant
U.S. Nuclear Regulatory Commission
