Nuclear Regulatory Commission
Scott Newberry
Watts Bar EIS
Washington, DC 20005

Dear Mr. Newberry,

The TVA is building a nuclear power plant (Watts Bar) that started construction in 1972. The construction of this plant, wich is not finished yet is costing American tax payers about one million dollars a day. There have been tons of complaints by workers that the plant is not safe. Any nuclear plant is exteseamly hazardus to the enviornment. Watts Bar is located right near a river for cheap dumping of waste, wich will cause deatly effects on all life forms in the Tennessee state. Nuclear Waste harms you by breaking down your cell wall. Watts Bar is not safe, if it opporates it will be endangeing the lifes of others, and the health of the Earth. Do not give Watts Bar approval to open. The prevention of this plant will prevent harm to all forms of life.

Sincerly,
Jonas Wood
