Here's the email from John. The Fort Stewart is an "example" results report they could generate.

Upper 3 Runs (not 3 Rivers)
Gordon
Dublin
Midville

Chris--We recently published the final report on a study that updated the modeling work we did back in the 90s. The report updates to 2002 conditions, uses finer-resolution particle tracking, and simulates projected changes in water use in the area. The report can be obtained at:

http://pubs.usgs.gov/sir/2006/5195/
(in addition to model results, the report includes potmaps, gw level data, climatic data, and water use data for 2002)

The original model study:

http://pubs.usgs.gov/wri/wri98-4062/

Ground-water levels from previous study:

http://pubs.usgs.gov/wri/wri97-4197/

The Fort Stewart :

http://pubs.usgs.gov/of/2006/1148/
