3.12S Piping Design Review

GE transmitted Revision 4 of the reference ABWR DCD to the NRC via letter dated March 28, 1997. The section titled "Introduction for Design Control Document" contains in tabular form the location of Tier 2* information which cannot be changed without prior approval of the NRC. Table 7 of the Introduction identifies the location in the DCD of various criteria associated with piping design for all classes of piping systems, piping components, and associated supports for the ABWR certified design. These same criteria are utilized, as applicable, for the portions of STP 3 & 4 outside the scope of the reference ABWR certified design.
