Summary:	I asked Mr. Myers why the concentration values were lower than what the Department of Agriculture stated. He said that they do an averaging of the concentration over the entire cell of 2,964,225 cubic meters. I asked if the material was mixed. The reply is that is somewhat mixed by the other material that is dumped at the same time that they are depositing the material from the Department of Agriculture but there is no intensional mixing. I asked him to submit the difference in the concentration of the Department of Agricultures concentrations to the amount in the RESRAD input values in writing.
