Atlanta, Georgia 30303

Dear Mr. O'Reilly:

WATTS BAR NUCLEAR PLANT UNITS 1 AND 2 - DIESEL GENERATOR ROOM EXHAUST FAN MODIFICATION - WBRD-50-390/81-73, WBRD-50-391/81-69 - SEVENTH INTERIM REPORT

The subject deficiency was initially reported to NRC-OIE Inspector R. V. Crlenjak on August 31, 1981 in accordance with 10 CFR 50.55(e) as NCR W-51-P. Interim reports were submitted on September 30 and December 2, 1981 and February 17, March 16, July 12, and November 29, 1982. TVA is continuing to work on the design modifications associated with this NCR. Our next report will be submitted on or about June 28, 1983.

TVA's initial evaluations concerning reportability determined that 10 CFR Part 21 was applicable to this nonconforming condition. However, due to oversight, previous interim reports failed to identify this fact.

If you have any questions, please get in touch with R. H. Shell at FTS 858-2688.

Very truly yours,

TENNESSEE VALLEY AUTHORITY
