Subject: COL at Bellefonte

I attended the evening session in Scottsboro this week and, while I remain a supporter of the project, I did come away with an uneasy feeling about several issues. My main concerns: (that were not even remotely addressed by your contingent) a) what is the short and long-term plan for removal/disposition of the contaminated wastes?; b) what is the estimated water temperature increase in the Tenn River/Guntersville Reservoir at various down-stream points and what, if any, are the anticipated effects on plant and animal/fish?; and c) how thorough, if any, have the studies been to determine the strength of the sub-structure in this portion of the valley? I believe these, as well as other issues/concerns, had better be thoroughly addressed at your next public session or you will meet with much more opposition than you currently are.
