# SOIL BORING LOG

PROJECT : Progress Energy Florida - COLA Investigation, Levy County Site LOCATION : 1723879.2 N, 457603.8 E (NAD83)

ELEVATION : 41.6 ft (NAVD88) DRILLING CONTRACTOR : Universal Engineering Sciences, Jacksonville, FL; Driller: B. Truitt; Cathead Operator: B. Crews

DRILLING METHOD AND EQUIPMENT : Dietrich D-50 S/N 232, mud rotary, cathead, NWJ rods, 6 tri-cone bit ORIENTATION : Vertical

WATER LEVELS : 2 ft bgs on 03/15/07 START : 3/14/2007 END : 3/21/2007 LOGGER : R. Bitely

| DEPTH BELOW SURFACE AND ELEVATION (ft) | SAMPLE INTERVAL (ft) | RECOVERY (ft) | #TYPE | STANDARD PENETRATION TEST RESULTS 6"-6"-6" (N) | SOIL DESCRIPTION: SOIL NAME, USCS GROUP SYMBOL, COLOR, MOISTURE CONTENT, RELATIVE DENSITY OR CONSISTENCY, SOIL STRUCTURE, MINERALOGY | SYMBOLIC LOG | COMMENTS: DEPTH OF CASING, DRILLING RATE, DRILLING FLUID LOSS, TESTS, AND INSTRUMENTATION |
|---|---|---|---|---|---|---|---|
| 41.6 | | | | | | | "Water level is based on Ground Water Monitoring at LNP site (FSAR Table 2.4.12.08)" Water at 6' below ground surface |
| | 3.5 | | | | | | |
| | 5.0 | 1.0 | SS-1 | 5-4-3 (7) | **Poorly Graded Sand With Silt (SP-SM)** 3.5-4.5' - very pale orange to moderate yellowish brown, (10YR 8/2 to 10YR 5/4), wet, loose, very fine to fine grained, 10-15% fines, nonplastic, <10% root matter and organic material, trace concretions up to 1/4", very fine silica sand and silt in an iron matrix | | |
| 5 36.6 | | | | | | | Few dense lenses from 5.0-8.5', thin, relatively consistent drilling rate (moderately rapid) |
| | 8.5 | | | | | | |
| | 9.4 | 0.5 | SS-2 | 9-50/5 (59/11") | **Limestone Fragments** 8.5-8.75' - very pale orange, (10YR 8/2), strong HCl reaction, gravel-sized, subrounded to angular, up to 1"x1-1/2" | | Very hard from 9.0-12.5', possible limestone lenses, light chatter, extremely slow advancement rate |
| 10 31.6 | | | | | **Silt (ML)** 8.75-9.0' - grayish orange, (10YR 7/4), moist to wet, hard, nonplastic, rapid dilatancy, mild to moderate HCl reaction, 10-15% very fine to medium grained sand, all carbonate derived | | |
| | 13.5 | | | | | | Relatively consistent from 12.5-28.5', moderately rapid drilling rate |
| | 15.0 | 0.8 | SS-3 | 27-17-4 (21) | **Silt With Limestone Fragments (ML)** 13.5-14.3' - very pale orange, (10YR 8/2), wet, very stiff, nonplastic, mild to moderate HCl reaction, 10-15% very fine to fine grained sand, 3 limestone lenses (<1/2") at 13.5', 13.7' and 14.0', all carbonate derived | | |
| 15 26.6 | | | | | | | |
| | 18.5 | | | | | | |
| | 20.0 | 1.3 | SS-4 | 40-54-50 (104) | | | SS-4 actual sample depth is 18.5-20.0' |
| 20 | | | | | | | |

# ROCK CORE LOG

PROJECT : Progress Energy Florida - COLA Investigation, Levy County Site LOCATION : 1723879.2 N, 457603.8 E (NAD83)

ELEVATION : 41.6 ft (NAVD88) DRILLING CONTRACTOR : Universal Engineering Sciences, Jacksonville, FL; Driller: B. Truitt; Cathead Operator: B. Crews

CORING METHOD AND EQUIPMENT : Dietrich D-50 S/N 232, mud rotary, NQ tools, NW/HW casing ORIENTATION : Vertical

WATER LEVELS : 2 ft bgs on 03/15/07 START : 3/14/2007 END : 3/21/2007 LOGGER : R. Bitely

| DEPTH BELOW SURFACE AND ELEVATION (ft) | CORE RUN, LENGTH, AND RECOVERY (%) | R Q D (%) | FRACTURES PER FOOT | DISCONTINUITIES – DESCRIPTION: DEPTH, TYPE, ORIENTATION, ROUGHNESS, PLANARITY, INFILLING MATERIAL AND THICKNESS, SURFACE STAINING, AND TIGHTNESS | SYMBOLIC LOG | LITHOLOGY: ROCK TYPE, COLOR, MINERALOGY, TEXTURE, WEATHERING, HARDNESS, AND ROCK MASS CHARACTERISTICS | COMMENTS: SIZE AND DEPTH OF CASING, FLUID LOSS, CORING RATE AND SMOOTHNESS, CAVING ROD DROPS, TEST RESULTS, ETC. |
|---|---|---|---|---|---|---|---|
| | 5 ft 98% | 80 | 1 | 89.0' - Bedding plane, <10 deg, rough, undulating, open 1/4" | | **Limestone** 83.0-84.5' - mild to moderate HCl reaction, mottled with zones of bioturbation having a secondary infill of a very fine, medium strong rock (R3) matrix, voids (<3/16") over 30% of surface, secondary infilling of bioturbated zone consisting of 20-30% of surface, trace fossil molds | |
| 90 -48.4 | | | 0 | | | | R9: 11 minutes |
| | | | 2 | 90.95' - Bedding plane, horizontal, smooth, undulating, open <1/4" | | | |
| | 91.5 | | NR | 91.25' - Mechanical break or bedding plane, 15 deg, rough, undulating, tight | | **No Recovery 86.0-86.5'** | |
| | | | 1 | 91.6' - Bedding plane, horizontal, smooth, undulating, tight | | **Limestone** 86.5-87.05' - moderate yellowish brown to very light gray, (10YR 4/2 to N8), very fine to fine grained, extremely weak to very weak (R0 to R1), grayish blue mottling (5PB 5/2), voids (3/16") over 60-80% of surface from 84.5-86.0' and fossiliferous with trace organics | |
| | | | 0 | 92.9' - Mechanical break | | | |
| | R10-NQ 5 ft 98% | 82 | 3 | 93.85-93.95' - Fracture zone, rough, undulating, 3 fractures, open <1-1/2" | | | |
| 95 -53.4 | | | 1 | | | | |
| | | | 4 | 95.3' - Fracture, 75 deg, smooth, undulating, tight | | 87.05-89.15' - Same as 86.5-87.05' except very light gray (N8) and grayish blue (5PB 5/2) mottling, voids (3/16") over 50-60% of surface, fossiliferous (microfossils) | R10: 16 minutes |
| | 96.5 | | NR | 95.85-95.9' - Clay seam, horizontal, smooth, undulating, 3/4" clay infilling, Fat Clay (CH), medium gray (N5), moist, soft, high plasticity | | | |
| | | | 1 | 96.05, 96.35' - Mechanical break or bedding plane (2), <10 deg, rough, undulating, tight | | 89.15-90.7' - fine grained, very weak (R1), voids (<3/16") over 30-50% of surface, moderately fossiliferous | |
| | | | 2 | 96.85, 97.55' - Bedding plane, <10 deg, rough, undulating, tight | | 90.7-91.4' - Same as 86.5-87.05' except no mottling | SC-2 collected at 98.05-99.0' |
| | R11-NQ 5 ft 100% | 98 | 0 | 97.05, 99.0, 99.75, 101.05, 101.4' - Mechanical break (5) 98.0' - smooth, undulating, <1/2" silt and/or clay sized infilling | | **No Recovery 91.4-91.5'** | |
| 100 -58.4 | | | 0 | | | **Limestone** 91.5-96.4' - moderate yellowish brown to yellowish gray, (10YR 5/4 to 5Y 7/2), very fine to fine grained, extremely weak to weak (R0 to R2) | |
| | | | 0 | | | 91.55-91.85' - fine grained, very weak (R1), voids (<3/16") over 30-50% of surface, fossiliferous | R11: 8 minutes |
| | 101.5 | | 1 | 101.55, 102.65, 103.75' - Bedding plane or fractures (3), horizontal, smooth, undulating, tight | | 91.85-94.6' - moderate HCl reaction, voids (<3/16") over 60-80% of surface, moderately fossiliferous (molds up to 1/2" x 1/4"), few cavities <1/2" diameter, trace organics | |
| | | | 1 | | | 94.6-96.4' - strong HCl reaction, gradual transition to >30% voids up to 1/16", 1/4" diameter cavity with medium light gray (N6) clay infill | |
| | R12-NQ 5 ft 96% | 86 | 1 | 104.0, 104.85' - Mechanical break | | **No Recovery 96.4-96.5'** | |
| 105 -63.4 | | | 0 | | | **Limestone** 96.5-101.5' - yellowish gray, (5Y 7/2), very fine to fine grained, strong HCl reaction, extremely weak to very weak (R0 to R1), voids (<3/16") over 70-80% of surface, moderately fossiliferous (molds <1/2"x1/4"), trace organics; 1/2" silt seam at 98.0', slow to fast dilatancy, low plasticity, carbonate material | |
| | | | >10 | 105.5-105.6' - Fracture zone, rough, undulating, gravel sized fragments, <1" diameter | | | R12: 3 minutes |
| | 106.5 | | NR | | | | |

CORING METHOD AND EQUIPMENT : CME 55 S/N 316625, mud rotary, NQ tools, NW/HW casing ORIENTATION : Vertical

WATER LEVELS : 2.0 ft bgs on 3/25/07 START : 2/24/2007 END : 3/8/2007 LOGGER : R. Gomez, C. LeBlanc

| DEPTH BELOW SURFACE AND ELEVATION (ft) | CORE RUN, LENGTH, AND RECOVERY (%) | RQD (%) | FRACTURES PER FOOT | DISCONTINUITIES DESCRIPTION: DEPTH, TYPE, ORIENTATION, ROUGHNESS, PLANARITY, INFILLING MATERIAL AND THICKNESS, SURFACE STAINING, AND TIGHTNESS | SYMBOLIC LOG | LITHOLOGY: ROCK TYPE, COLOR, MINERALOGY, TEXTURE, WEATHERING, HARDNESS, AND ROCK MASS CHARACTERISTICS | COMMENTS: SIZE AND DEPTH OF CASING, FLUID LOSS, CORING RATE AND SMOOTHNESS, CAVING ROD DROPS, TEST RESULTS, ETC. |
|---|---|---|---|---|---|---|---|
| | 88.5 | | | | | | |
| | R0-NQ 2.5 ft 60% | 47 | 1 | 88.7' - Fracture, horizontal, rough, undulating | | **Limestone** 88.5-90.0' - dusky yellow, (5Y 6/4), fine grained, moderate to strong HCl reaction, weak to medium strong (R2 to R3), 80% coverage of 1/16" voids on surface, few larger 3/16" voids near lower end of run, moderately fossiliferous (casts), lignite disk 1/8" thick, silty matrix when grains broken down | Core run R0-NQ advanced 88.5-91.0' to set 5-feet stroke for remainder of borehole |
| 90 -47.7 | | | 1 | 89.8' - Fracture, horizontal, rough, undulating, break is along plan of 1-3/16" clam shell fossil | | | SC-1 collected at 89.1-89.8' |
| | | | NR | | | | R0: 4 minutes |
| | 91.0 | | | | | | |
| | | | 1 | 91.7' - Fracture, 25 deg, rough, undulating, 3/16" open, semi-tight | | **No Recovery 90.0-91.0'** | 2/25/08 08:00 Begin inserting NQ rods |
| | | | 1 | 92.8' - Fracture, horizontal, smooth, undulating, open | | **Limestone** 91.0-96.0' - Same as 88.7-89.0' except more abundant cavities (up to 9/16") from 93.5-94.5', cavities appear to be fossil molds, some small (1/16"x1/8") fragments of dark organic material from 94.5-96.0' | |
| | R1-NQ 5 ft 100% | 75 | 0 | | | | |
| | | | >10 | 94.0' - Fractures, 30-50 deg, multiple fractures | | | Driller's Remark: Loss of circulation between 94.0-96.0' |
| 95 -52.7 | | | | | | | R1: 14 minutes |
| | | | 2 | 95.4' - Fractures (2), 45 deg, almost perpendicular, one is smooth and undulating with some dark staining, other is rough and undulating with no staining | | | |
| | 96.0 | | | | | | |
| | | | >10 | 96.0-97.3' - Fractures, 0-90 deg, rough, undulating, slightly weathered, 3/16" relief, open | | **Limestone** 96.0-97.3' - yellowish gray with pale olive (20%), (5Y 7/2 with 10 6/2), fine grained, moderate to strong HCl reaction, weak (R2), 50-60% coverage of 1/16" voids on surface, areas with voids mix irregularly with areas without voids, moderately fossiliferous, few voids >1/16" | |
| | | | >10 | | | | |
| | R2-NQ 5 ft 26% | 0 | NR | | | **No Recovery 97.3-101.0'** | |
| 100 -57.7 | | | | | | | R2: 7 minutes |
| | 101.0 | | | | | | |
| | | | >10 | 101.0-102.8' - Fractures, 0-45 deg, rough, undulating, up to 3/16" relief, open, one 2" fragment shows coring marks in two different directions (at 101.9'), fracture at 102.1' is moderately tight and 30% rough and undulating | | **Limestone** 101.0-102.0' - Same as 96.0-97.3' except up to 20% voids, 6-7 gastropod casts up to 3/16" 102.0-102.3' - dusky yellow, (5Y 6/4), fine grained, moderate to strong HCl reaction, weak (R2), 85% coverage of 1/16" voids on surface 102.3-102.8' - light olive gray, (5Y 5/2), fine grained, moderate to strong HCl reaction, 30% coverage of 1/16" voids on surface | |
| | | | >10 | | | | Driller's Remark: Low recovery possibly from losing inner core from broken pieces during drilling actions |
| | R3-NQ 5 ft 36% | 17 | NR | | | | Drilling head appears loose during coring causing an eccentric advancement, breaking up rock |
| 105 -62.7 | | | | | | **No Recovery 102.8-106.0'** | R3: 11 minutes |
| | 106.0 | | | | | | |
| | | | >10 | 106.3-107.0' - Fractures, 0-60 deg, rough, undulating, fragments range from 3/16" to 1-1/2", open | | | |
| | | | 5 | 107.0-107.4' - Fracture, vertical, rough, undulating, tight | | | |
| | R4-NQ | | | | | | |

| DEPTH BELOW SURFACE AND ELEVATION (ft) | CORE RUN, LENGTH, AND RECOVERY (%) | DISCONTINUITIES: R Q D (%) | DISCONTINUITIES: FRACTURES PER FOOT | DISCONTINUITIES: DESCRIPTION (DEPTH, TYPE, ORIENTATION, ROUGHNESS, PLANARITY, INFILLING MATERIAL AND THICKNESS, SURFACE STAINING, AND TIGHTNESS) | SYMBOLIC LOG | LITHOLOGY (ROCK TYPE, COLOR, MINERALOGY, TEXTURE, WEATHERING, HARDNESS, AND ROCK MASS CHARACTERISTICS) | COMMENTS (SIZE AND DEPTH OF CASING, FLUID LOSS, CORING RATE AND SMOOTHNESS, CAVING ROD DROPS, TEST RESULTS, ETC.) |
|---|---|---|---|---|---|---|---|
| -76.1 | | | 1 | 117.9' - Mechanical break or bedding plane, rough, undulating, tight | | **Limestone** | R13: 7 minutes |
| | 121.0 | | | 118.25' - Mechanical break or bedding plane, <10 deg, rough, undulating, tight | | 119.5-120.5' - Same as 116.0'-119.5' except grayish yellow, (5Y 8/4), up to 25% spheroidal voids (<1/16") | |
| | | | 2 | 119.45' - Mechanical break or bedding plane, <10 deg, rough, undulating, dark gray stains, open up to 1/2" | | 120.5-121.0' - Same as 116.0'-119.5' except yellowish gray, (5Y 8/1), very fine grained, trace voids, 15% elongated cavities up to 1/8"x1/2", poorly fossiliferous | Chalk like or powder like rock, this run contains rock with vertical fractures- possible stress related to over burden |
| | | | 0 | 119.65' - Bedding plane, horizontal | | | |
| | R14-NQ 5 ft 80% | 75 | 2 | 120.3' - Bedding plane or mechanical break, horizontal, rough, undulating, open 1/8" gap | | 121.0-125.0' - yellowish gray, (5Y 8/1), strong HCl reaction, very weak to weak (R1 to R2), 10% voids up to 1/16", wavy bedded discontinuity 1/2" thick at 122.0', gray staining over entire interval, poorly fossiliferous (casts), trace dark gray very fine particles, upper most 1' is the same as the bottom of R13 | |
| | | | 1 | 121.75' - Bedding plane or mechanical break, horizontal, rough, undulating, tight | | | |
| 125 -81.1 | | | NR | 121.85' - Bedding plane or mechanical break, horizontal, rough, undulating, tight | | | SC-4 collected at 124.5-125.0' |
| | 126.0 | | | 123.05' - Bedding plane or mechanical break, horizontal, rough, planar, tight | | | R14: 5 minutes |
| | | | | 123.35, 123.55' - Mechanical break | | | Driller's Remark: Soft drilling at 124.5-125.0' |
| | | | | 123.9' - Mechanical break, rough, planar, tight | | **No Recovery 125.0-126.0'** | |
| | | | 1 | 124.05' - Mechanical break or bedding plane, smooth, planar, tight | | **Limestone** | |
| | | | 2 | 126.5' - Mechanical break or bedding plane, horizontal, rough, planar, open 1/16" | | 126.0-129.6' - yellowish gray with moderate gray staining, (5Y 8/1), strong HCl reaction, 126-128.5' is very fine chalk-like feel, poorly fossiliferous (trace casts), 25% spheroidal voids (mostly 1/16"x1/16"), trace cavities up to 1/2"x1/4" | |
| | R15-NQ 5 ft 72% | 52 | 2 | 127.0' - Mechanical break, horizontal, rough, undulating, tight | | | |
| | | | 2 | 127.3-127.45' - Fracture zone | | | |
| | | | | 128.3' - Mechanical break or bedding plane, horizontal, rough, undulating, open 1/16" | | | |
| 130 -86.1 | | | NR | 128.8' - Mechanical break, horizontal, rough, undulating, tight | | 128.5-129.6' highly fossiliferous (casts, molds, micro fossil), 20-25% cavities partially filled (rimmed with calcite) | |
| | 131.0 | | | 129.02-129.05' - Fracture zone | | | R15: 7 minutes |
| | | | | 129.4' - Bedding plane or mechanical break, horizontal, rough, undulating, tight, assume core loss from bottom of run | | **No Recovery 129.6-131.0'** | Driller's Remark: Soft lense from 127.0-128.0' |
| | | | >10 | | | **Limestone** | Appears similar to 90-115', a vertical fracture in this interval is over 1.5' long |
| | | | >10 | 132.0' - Mechanical break, horizontal, rough, planar, for horizontals, vertical stained set of fractures at 132', 80-100% surface covered. | | 131.0-135.0' - Same as 126.0-128.5' except bottom most 0.5' returns to "clean" un-stained yellowish gray (5Y 8/1) | |
| | R16-NQ 5 ft 80% | 10 | >10 | | | | |
| | | | 2 | | | | |
| 135 -91.1 | | | NR | | | **No Recovery 135.0-136.0'** | R16: 7 minutes |
| | 136.0 | | | | | | |
| | | | 0 | | | **Limestone** | |
| | | | >10 | 137.45' - Bedding plane, 15-20 deg, brownish black stains, tight | | 136.0-137.45' - light olive gray, (5Y 6/1), strong HCl reaction, strong (R4), wavy black mineralization laminae, trace cavities up to 1-1/2" long | |
| | R17-NQ 5 ft 96% | 64 | >10 | 137.8-138.15' - Fracture zone, up to 2" subrounded pieces | | | |
| | | | 2 | 138.35' - Fracture or mechanical break, 70-80 deg | | | |
| 140 | | | | | | | |

# SOIL BORING LOG

PROJECT : Progress Energy Florida - COLA Investigation, Levy County Site LOCATION : 1724122.8 N, 458024.1 E (NAD83)

ELEVATION : 41.7 ft (NAVD88) DRILLING CONTRACTOR : Universal Engineering Sciences, Orlando, FL; Driller: T. Williams

DRILLING METHOD AND EQUIPMENT : CME 550X S/N 340253, mud rotary, auto hammer, AWJ rods, 3-7/8" tri-cone bit ORIENTATION : Vertical

WATER LEVELS : 7.0 ft bgs on 6/5/07 START : 6/5/2007 END : 6/6/2007 LOGGER : B. Ellis, D. Thomas
