PROJECT : Progress Energy Florida - COLA Investigation, Levy County Site LOCATION : 1723010.2 N, 458111.7 E (NAD83)

ELEVATION : 42.4 ft (NAVD88) DRILLING CONTRACTOR : Universal Engineering Sciences, Gainesville, FL; Driller: M. Boatright; Cathead Operator: M. Griffin

CORING METHOD AND EQUIPMENT : CME 550 S/N 186073, mud rotary, NQ tools, NW casing ORIENTATION : Vertical

WATER LEVELS : 4.41 ft bgs on 3/06/07 START : 2/21/2007 END : 2/23/2007 LOGGER : C. LeBlanc

| DEPTH BELOW SURFACE AND ELEVATION (ft) | CORE RUN, LENGTH, AND RECOVERY (%) | DISCONTINUITIES: R Q D (%) | DISCONTINUITIES: FRACTURES PER FOOT | DISCONTINUITIES: DESCRIPTION (DEPTH, TYPE, ORIENTATION, ROUGHNESS, PLANARITY, INFILLING MATERIAL AND THICKNESS, SURFACE STAINING, AND TIGHTNESS) | SYMBOLIC LOG | LITHOLOGY (ROCK TYPE, COLOR, MINERALOGY, TEXTURE, WEATHERING, HARDNESS, AND ROCK MASS CHARACTERISTICS) | COMMENTS (SIZE AND DEPTH OF CASING, FLUID LOSS, CORING RATE AND SMOOTHNESS, CAVING ROD DROPS, TEST RESULTS, ETC.) |
|---|---|---|---|---|---|---|---|
| -72.6 | | | 1 | 113.7' - Fracture, horizontal, rough, planar, tight, with weathered edges | | 109.7-110.95" - Same as 106.5-106.8' | |
| | | | 3 | 113.9' - Fracture or mechanical break, 70 deg, rough, undulating, healed | | **No Recovery 110.95-111.5'** | R8: 5 minutes |
| | 116.5 | | | 114.35' - Fracture, horizontal, planar to slightly undulating | | **Limestone** | |
| | | | >10 | 115.3' - Fracture, 70 deg, rough, undulating, 5/16" relief, terminates at a rough stepped fracture at 115.65', tight | | 111.5-116.5' - dusky yellow to moderate yellowish brown, (5Y 6/4 to 10YR 5/4), fine grained, moderate HCl reaction, weak (R2), 20% fine (1/16") voids, few cavities up to 1/4" | |
| | | | 1 | 115.9' - Fracture, 70 deg, rough, undulating, tight, weathered | | 116.5-116.7' - Same as 111.5-116.5' except medium strong (R3), with some weaker zones and rock fragments | SC-2 collected 118.0-118.97' |
| | R9-NQ 5 ft 72% | 19 | 2 | 116.45' - Fracture, horizontal, rough, undulating, 1/8" relief | | | |
| | | | 1 | 116.7-117.0' - Fracture zone, subrounded rock fragments 1/2"-2" | | 116.7-117.0' - Same as 111.5-116.5' except fragmented | |
| 120 -77.6 | | | NR | 117.45' - Fracture, 10 deg, rough, undulating, tight, cuts across 80 deg fracture at 117.65' 117.65' - Fracture, 80 deg, rough, undulating, 10 inches long, black staining (pyrite), tight, weathered | | 117.0-119.2' - Same as 111.5-116.5' except medium strong (R3), with some weaker zones and rock fragments | R9: 5 minutes |
| | 121.5 | | | | | 119.2-120.1' - Same as 111.5-116.5' except no to mild HCl reaction, very weak to weak (R1 to R2), sections of increased voids | |
| | | | 0 | 118.0' - Fracture, 25 deg, smooth, stepped, voids and molds on fracture surface | | **No Recovery 120.1-121.5'** | |
| | | | >10 | 118.97' - Fracture, 10 deg, rough, undulating, white crystalline infill, trace 1/16" voids on surface | | **Limestone** | |
| | R10-NQ 5 ft 58% | 19 | >10 | 119.20' - Fracture, 10 deg, rough, stepped, open, friable, infilling, increased voids 120.8' - Fracture, horizontal, rough, undulating | | 121.5-122.5' - dusky yellow to moderate yellowish brown, (5Y 6/4 to 10YR 5/4), fine grained, moderate to strong HCl reaction, medium strong (R3), small (1/16") voids over 20-25%, fossiliferous (numerous molds/casts, small [1/4"] circular/oval voids, larger [1"] thin elongate cavities) | |
| 125 -82.6 | | | NR | 122.5' - Fracture, 15 deg, rough, undulating, tight but weathered and friable 122.7' - Fracture, 25 deg, smooth, stepped, top of fracture zone | | | R10: Run time not recorded |
| | 126.5 | | | 122.7-122.9' - Fracture zone, subangular 1" fragments | | 122.5-122.85' - Same as 121.5-122.5' except very weak to weak (R1 to R2), secondary infilling of cavities, more friable | |
| | | | >10 | 123.15, 123.4' - Fractures or bedding plane, 0-10 deg, rough, planar, tight, some fragmentation | | 122.85-123.7' - Same as 121.5-122.5' except 5% coverage of voids (1/16"), no fossils or cavities, elongate molds 1/16" wide, sharp angular breaks | |
| | | | >10 | 123.25' - Fracture, 80 deg, rough, planar, tight, angular | | **Silty Sand (SM)** | |
| | R11-NQ 5 ft 78% | 42 | 1 | 123.66' - Fracture, 20 deg, rough, undulating, top of unconsolidated zone 124.15' - Fracture, 10 deg, rough, undulating, bottom of unconsolidated zone | | 123.7-124.15' - dark yellowish orange, (10YR 6/6), wet, fine grained, nonplastic, mild HCl reaction, 10% coarse sand-sized, 30% nonplastic fines, 10% fine gravel-size material, small fossil fragments, all calcareous material | SC-3 collected 128.9-129.92' |
| 130 -87.6 | | | 0 | 124.25' - Fracture, 70 deg, rough, undulating 126.8' - Fracture, 10 deg, rough, stepped, infilled | | | |
| | 131.5 | | NR | 126.8-127.9' - Fracture zone, no clear contacts, some vertical fractures at depth within zone | | | R11: 5 minutes |
| | | | >10 | 127.9' - Fracture, horizontal, rough, undulating, open | | **Limestone** | |
| | | | >10 | 128.05' - Fractures (2), horizontal and 30 deg, rough, undulating, tight to open, fit together, weathered, slight infill | | 124.15-124.4' - Same as 122.85-123.7' except weak (R2) | |
| | R12-NQ 5 ft 42% | 8 | | 128.50' - Fracture, 20 deg, rough, undulating 128.92' - Fracture, 10 deg, smooth, undulating | | **No Recovery 124.4-126.5'** | |
| 135 | | | | 131.6-131.8' - Fracture zone, with angular fragments 1/2"-2" in size, bounded by rough and undulating horizontal fractures | | | |

# ROCK CORE LOG

PROJECT : Progress Energy Florida - COLA Investigation, Levy County Site LOCATION : 1723097.8 N, 458026.5 E (NAD83)

ELEVATION : 42.4 ft (NAVD88) DRILLING CONTRACTOR : Prosonic, Ocala, FL; Driller: N. Gamache

CORING METHOD AND EQUIPMENT : Rotosonic S/N SR-116, sonic, 6" outer casing and 4" core barrel ORIENTATION : Vertical

WATER LEVELS : 4.41 bgs on 3/6/07 START : 2/27/2007 END : 3/7/2007 LOGGER : C. Sump, J. Burkard

| DEPTH BELOW SURFACE AND ELEVATION (ft) | CORE RUN, LENGTH, AND RECOVERY (%) | DISCONTINUITIES: R Q D (%) | DISCONTINUITIES: FRACTURES PER FOOT | DISCONTINUITIES: DESCRIPTION (DEPTH, TYPE, ORIENTATION, ROUGHNESS, PLANARITY, INFILLING MATERIAL AND THICKNESS, SURFACE STAINING, AND TIGHTNESS) | SYMBOLIC LOG | LITHOLOGY (ROCK TYPE, COLOR, MINERALOGY, TEXTURE, WEATHERING, HARDNESS, AND ROCK MASS CHARACTERISTICS) | COMMENTS (SIZE AND DEPTH OF CASING, FLUID LOSS, CORING RATE AND SMOOTHNESS, CAVING ROD DROPS, TEST RESULTS, ETC.) |
|---|---|---|---|---|---|---|---|
| | | | | 277.0-287.0' - NA | | **Disaggregated Limestone** 277.0-283.4' - with gravel-size limestone fragments (20-40%) | 4" core penetration slow (hard) upper 5-6 ft of run, very rapid in bottom 3 ft<br>6" casing driving very hard entire length of run |
| 280 -237.6 | | | NA | | | | Lost core material may have been poorly graded sand sized material that fell out of core barrel or (less probably) a void from 284-287, based on difficulty of driving 6" casing |
| | R29-SN 10 ft 64% | NA | | | | | |
| | | | | | | **No Recovery 283.4-287.0'** | |
| 285 -242.6 | | | NR | | | | |
| | 287.0 | | | | | | |
| | | | | 287.0-297.0' - NA | | **Disaggregated Limestone** 287.0-290.0' - with gravel-size (1/4"-3/4") limestone fragments (10-15%), fragments are angular to subangular in shape, sand-sized material has strong HCl reaction, silty material has mild to moderate HCl reaction | Core from 287-291.5' recovered during 1st attempt coring 287.0-297.0' (45% recovery), bottom half of run assumed to have fallen out of core barrel |
| | | | NA | | | | |
| 290 -247.6 | | | | | | **Limestone** 290.0-291.5' - light olive gray, (5Y 5/2), fossiliferous, small (1/16"-1/8") voids over (15-30%) of surface, few larger (<3/4") cavities, horizontal partings 1"-1-1/2" thick, fragments (2"-4"), few fragments are full core diameter | 6" casing driven to 292' with difficulty, 4" core barrel retrieved and 6" casing advanced to 297 (causing slough to accumulate in hole) |
| | R30-SN 10 ft 95% | NA | NR | | | | |
| | | | | | | **No Recovery 291.5-292.0'** | |
| | | | NA | | | **Disaggregated Limestone With Limestone Fragments** 292.0-297.0' - moderate HCl reaction, gravel-sized (1/2") limestone fragments 5-10%, HCL reaction is delayed | |
| 295 -252.6 | | | | | | | |
| | 297.0 | | | | | | |

|---|---|---|---|---|---|---|---|
| -30.4 | 60.0 – 61.5 | 1.1 | SS-13 | 24-8-7 (15) | **Limestone** 60.0-60.3' - mild HCl reaction, in 1/4" pieces, same as limestone fragment in SS-12 | | Finished drilling at 60.0' on 7/1/2007, HW casing to 45.0' Resume drilling at 7:30 7/2/2007 |
| | | | | | **Silty Sand With Limestone Fragments (SM)** 60.3-61.1' - mottled light olive gray, (5Y 5/2), wet, medium dense, fine to coarse grained, mild to moderate HCl reaction, similar to SS-11 and SS-12, all carbonate materials, 15-35% nonplastic fines varied in lenses, 15% fine gravel-sized limestone | | |
| 65 | 65.0 | | | | | | |
| -35.4 | 66.5 | 1.0 | SS-14 | 24-55-48 (103) | **Silty Sand (SM)** 65.0-66.0' - mottled light olive gray to medium gray, (5Y 5/2 to N5), wet, very dense, predominantly fine to medium grained, mild to moderate HCl reaction, similar to above, all carbonate materials, 5-10% coarse sand, 20-40% fines (varies in lenses) | | SS-9 through SS-14: Darker gray colors more associated with coarser lenses |
| 70 | 70.0 | | | | | | |
| -40.4 | 71.5 | 1.1 | SS-15 | 18-27-31 (58) | **Silty Sand (SM)** 70.0-71.1' - pale to moderate yellowish brown with scattered medium gray lenses, (10Y 6/2 to 10YR 5/4 with N5), wet, very dense, fine to medium grained, mild to moderate HCl reaction, similar to above, 35% nonplastic fines | | Driller's Remark: Materials are not coreable (wash out of core barrel) SS-9 through SS-15 appear to be interbedded carbonate silts, sands with some gravels and limestone lenses are irregularly shaped and sized. |
| 75 | 75.0 | | | | | | |
| -45.4 | 75.1 | 0.0 | SS-16 | 50/1.5" (50/1.5") | **No Recovery 75.0-75.1'** | | Driller's Remark: Still in and out of harder and softer lenses |
