Great, thanks! So, regardless of EPM, what is the due date?

Hi Harriet,

I made Don Habib aware of the problem you are having with EPM. A couple of weeks ago I told him of the problem and he updated the system. Anyway, he is looking it this right now for you.

regards,

Paul

Oh, also, I'm sure I'm not the only technical person who has this assignment in EPM so you should probably send it to the entire team.

Harriet

Harriet,

Here is the STP Binning report from PNNL. Please let me know if you have any comments.

Paul

I have attached a couple of different reports for your review. The "STP Comment Detail Report" contains the entire script of each comment document and shows what we identified as a comment and how it was binned (assigned to a particular subject matter). The comment is highlighted and preceded by the comment number and bin. Review this document to ensure we captured all relevant comments, for context of comments, to delete comments, and to add text to existing comments as you see fit. I am not sure if you will easily be able to do this using "track changes" or if it will be easier to print out hard copies, make changes, and send the hard copies back to me. Whatever works for you.

The "STP Comment Summary Report" presents just the comments pulled from each document. In other words, it leaves out all the text that is not a comment. Use this report to cross-check what the other report shows. I noticed a few of the changes I made did not show in the detail report but are correct in the summary report, and if we added any annotations (like for letter #20) they only show in the summary report.

I also provided the comment tracking table so you can cross-reference our comment number to a specific author. The comment numbers appear as **STP-COL3&4-SC-00001** in the reports. Looking at the last five digits, this particular comment refers to document #1, Timothy Ryan.

You are going to see some funky things in the reports due to converting PDFs into database text. Tables do not show as tables, but just a run of text, spacing may be off, weird symbols appearing instead of letters . . . Those sort of things. And we have put all the ML #s into the database even though they do not all appear in these reports. We still have a few bugs to work out with the database, but it's pretty close to complete.

A couple of notes - document #19 was transcribed from a comment form and document #20 was transcribed from the hand-written note handed to Jim Biggins in the parking lot at the meeting. I point this out because they look different from the other comment documents in the detail report.

I am going to have the team start writing responses in order to make up some time. I am assuming our delineation/binning is not too far off the mark and we will be safe in doing so.

If you need any help, just give me a call.
