October 15, 1986

IE INFORMATION NOTICE NO. 86-25, SUPPLEMENT 1: TRACEABILITY AND MATERIAL CONTROL OF MATERIAL AND EQUIPMENT, PARTICULARLY FASTENERS

Addressees:

All nuclear reactor facilities holding an operating license or construction permit.

Purpose:

This notice is to supplement IN 86-25 with information provided by the Industrial Fastener Institute (IFI) concerning an example of improperly marked fasteners. It is expected that the recipients will review the information for applicability to their facilities and consider actions, if appropriate, to preclude similar problems from occurring at their facilities. However, suggestions contained in this notice do not constitute NRC requirements; therefore, no specific action or written response is required.

Discussion:

The IFI issued a news release on May 2, 1986 expressing its concerns about intentionally mismarked SAE J429K grade 8 bolts. According to IFI, these falsely marked bolts (grade 8.2 for grade 8) could undergo stress relaxation when subjected to temperatures above 500°F, and such relaxation could result in equipment failure and injury.

The IFI news release states that 75% of the foreign imported bolts (mainly from the Far East) have incorrect "headmarkings," indicating that they are SAE J429K grade 8 rather than grade 8.2. Grade 8 is a fine grain, medium carbon alloy steel (quenched and tempered), and grade 8.2 is a low carbon quenched and tempered martensite steel. The mechanical properties of both grades are essentially identical. For both grades, the tensile and yield strengths are 150 ksi and 120 ksi, respectively. However, the two grades of bolts are heat treated differently. Grade 8 bolts are quenched in oil and tempered at 800°F while grade 8.2 bolts are quenched in water or oil and tempered at 650°F. Consequently, using an 8.2-grade bolt in lieu of an 8-grade bolt at temperatures near 650°F could result in stress relaxation of the grade 8.2 bolt resulting from a change in the original tempered microstructure. Although SAE grade 8 and 8.2 bolts are not commonly used for high temperature safety-related applications in nuclear power plants, this situation provides an example of the type of problem which can result from anything less than a rigorous approach to the

PDR IE Notice 86-025

procurement of any safety-related component. Substitutions of this type could be detected by an effective receipt inspection program if the receipt inspections went beyond visual inspection requirements and included, on a sample basis, chemical analyses, nondestructive testing such as eddy current or conductivity testing, or destructive testing such as metallographic analyses.

No specific action or written response to this notice is required. If you have any questions regarding this matter, contact the Regional Administrator of the appropriate regional office or this office.
