SUBJECT: SOUTH TEXAS PROJECT UNITS 3 AND 4

Dear Mr. Martin:

Enclosed is a list of information regarding the proposed construction of South Texas Project Units 3 and 4. The proposed project is to construct two General Electric Advanced Boiling Water Reactors at the existing South Texas Project Electric Generating Station site. The Nuclear Regulatory Commission (NRC) issued the Final Environmental Statement (FES) in August 1986 (NUREG 1171) for Units 1 and 2. In the FES, the NRC concluded that nothing of known historic or archaeological interest would be disturbed by the operation of Units 1 and 2. The summary and conclusions are included. We are requesting another review under Section 106 of the National Historic Preservation Act or your concurrence that we need to do nothing further because of the previous review. As we discussed, the construction of the new units will be on previously disturbed land that was used during the original construction activities; however, deeper excavations will be required. If you have any questions or require additional information, please call me at (361) 972-8328. We appreciate your help on this project and look forward to hearing from you.

Sincerely,

S. L. Dannhardt
Environmental Supervisor

NO HISTORIC PROPERTIES AFFECTED
