Subject: Request for clarification on Response to Environmental RAI GW-2

April:

We have the following clarification request for Environmental RAI GW-2.

The groundwater contract reviewer cannot find the response to the RAI in NND-09-0171 (Response to safety RAI 2.4.13.2). If you could elaborate where in the RAI response is the discussion on the selection and uncertainties in the conservative hydraulic conductivity values used in the pathline analyses for the saprolite/shallow bedrock and deep bedrock zones that goes beyond the 75 percentile from the slug test data as already mentioned in the ER/FSAR for the saprolite/shallow bedrock zone?

Mark Williams (groundwater) is available this week if we need to arrange a discussion as to how best to address the needed clarification.
