Subject: Submittal of NEI 08-08, Revision 2, *Generic FSAR Template Guidance for Life Cycle Minimization of Contamination*

Project Number: 689

This letter provides NEI 08-08, Revision 2, *Generic FSAR Template Guidance for Life Cycle Minimization of Contamination* (Enclosure 1), for NRC review and endorsement in accordance with 10 CFR 50.4. The industry has developed this guidance generically for use by all combined license (COL) applicants.

The document has been revised to fully address recommendations of the NRC Advisory Committee on Reactor Safeguards (ACRS) contained in a letter to Mr. R.W. Borchardt, dated July 22, 2009 (Enclosure 2). Development of these generic program descriptions will assure a consistent approach to the preparation of COL applications in these areas that is in accordance with NRC requirements and guidance. Such an approach will reduce industry and NRC resource burden associated with the development, review, and approval of COL applications because only a single staff review is required. To support current COL applications, we understand that the staff's schedule is to complete its review and issue an SER by August 31, 2009.

If you have any questions, please contact me or Ralph Andersen (202-739-8111; rla@nei.org).

Sincerely,

Russell J. Bell
