Subject: Your request for Amendment to the NRC license 29-27855-01

I completed a preliminary review of your request and noted that the application does not indicate if Eric Angeles will also replace Frank Buccini as the supervisor of use of Iodine 125. Also no training and experience was provided for Eric Angeles to support this request. Your license authorizes limited quantites of byproduct material and although the training and experience necessary may be limited, you need to provide this to assure us that he understands the regulatory and safety issues.

You may fax a response to 610 337-5269 and refer to Mail Control No. 144068. Because New Jersey plans to soon become an Agreement State (and take over the licensing)at the end of the month) you should respond quickly in order for us to complete this action.

Thank you
