Subject: Facility Inspection

Marie,

Here is a summary of my past experience involving a material license from the NRC:

1994-2002 Caribbean Quality Control Services, Inc. St. Croix, USVI
Gauge user & RSO Certified
(Company had license already)

2002-2009 Virgin Island Paving, Inc. St. Croix, USVI, License # 55-25624-01
Gauge user & RSO Certified
(Obtained new license for company)

2009- DSM Holdings,llc. St. Croix, USVI
Recertifed Hazmat Training for RSO certification.
(Currently applying for new license for this company)

I hope this informatioin can be helpful to you. Maybe you could change the facility pre inspection
to a regular inspection. This would allow us to obtain our new license and purchase a density gauge
for our new independent testing lab we are trying to open. There are two upcomming projects
which we are preparing for.
I had a lab inspection at VI Paving with Sitar earlier this year. If you have any further questions please call.

Shawn McConnell
Project/QC Mgr.
