AUG 5 1970

Mr. Donald J. McCormick
General Superintendent
Consolidated Edison Company of New York
Indian Point Station
Buchanan, New York

Dear Mr. McCormick:

This is in regard to the forthcoming "cold" operator license examinations which will be administered at the Indian Point Station, Unit No. 2.

Although we have not yet received a request to administer these examinations, we believe, based on our knowledge of the construction schedule, that we should make preliminary arrangements.

We would appreciate receiving information from you regarding the number of individuals who will be applying for licenses and the class of license for which they will apply. Also, please indicate the bases that you have used to determine that the individuals involved meet the eligibility requirements pursuant to Section 55.25, including previous licenses held and details of the training programs in which they have participated.

In order for us to administer examinations, it will be necessary for us to receive a complete set of the approved operating and emergency procedures for the Indian Point Station, Unit No. 2 well in advance of the administration of the written portion of the examination.

With regard to scheduling dates for these examinations, we suggest the following time sequence based on the core loading date. Actual dates should be agreed to as soon as your schedule becomes firm.

8110240423 700805
PDR ADOCK 05000247
V PDR

Date	Activity
Six to eight weeks prior to the administration of the written examinations	Receipt by the Operator Licensing Branch of all applications and operating and emergency procedures
Six to eight weeks prior to fuel loading	Administration of the written examinations
Two to four weeks prior to fuel loading	Administration of the "cold" operating tests
One week prior to fuel loading	Notification of final examination results and issuance of licenses

The above schedule will provide time for preparing the examinations, grading the written examinations and evaluating results of the "cold" operating tests so that successful applicants will receive licenses prior to the beginning of the core loading operation.

The examining team will be led by AEC Headquarters Examiner, Reese J. Bursey. All matters pertaining to scheduling dates and times for the examinations should be discussed with Mr. Bursey or myself.

Sincerely yours,
