Dear Sir,

This letter is to express my deepest concern over the continued operation of the Indian Point nuclear reactors. The most recent mishaps and mismanagement once again clearly point to the dangers involved. I urge you to put all your efforts into closing the plant down before a major accident occurs. If we follow the history of this aging plant we will see that we are pointed on a ominous road. We still have time to make a correction. I sincerely hope you work towards a safe solution, the only one being the closing of the reactor. Thank you for your time.
