Consolidated Edison Company of New York
Attention: Mr. W. W. Lapsley, Executive Vice President
Central Operations
4 Irving Place
New York, New York 10003

Docket No. 50-247

Gentlemen:

This refers to the inspection conducted by Mr. Tillou of this office on December 20, 1971, of construction activities authorized by AEC Construction Permit No. CPPR-21, and to the discussions of our findings held by Mr. Tillou with Mr. Dadson and Mr. Schuster of your staff at the conclusion of the inspection.

The area examined during this inspection was limited to your program for repair of the eight-inch Darling check valves installed on the accumulators of the safety injection system. Within this area, the inspection consisted of selective examinations of procedures and representative records, interviews with plant personnel, and observations by our inspector.

During this inspection, it was found that several elements of your valve repair program appear to be in nonconformance with the Final Safety Analysis Report (FSAR) and AEC requirements. The items and references to the pertinent requirements are listed in the enclosure to this letter. Please provide us within 30 days, in writing, with your comments concerning these items, any steps which have been or will be taken to correct them, any steps that have been or will be taken to prevent recurrence, and the date all corrective action or preventive measures were or will be completed. Your reply should emphasize, in particular, any appropriate changes that have been or will be made to improve the effectiveness of your quality assurance program to prevent recurrence.
