Dear Friends,

Greetings from the Carbon County Higher Education Center! I am pleased to write this letter in support of UR Energy's application to begin work on the Lost Creek ISR Project in Carbon County, Wyoming.

The company has indicated that they intend to train and hire most of their employees from the local labor force which would be a good thing. It would also be a good thing if they should they bring in additional permanent employees from outside the community, however. We recently broke ground on a new, state of the art grade school in Rawlins, not anticipating the lower gas and oil prices and the subsequent departure of a significant number of families from our community. Any new families brought in by UR Energy's project would be a welcome addition to our community and to our school system....we are ready for them!

UR Energy has consulted with the Carbon County Higher Education Center about providing training and education for their employees. In addition, UR Energy has consulted with other educational organizations in the region, including Western Wyoming Community College, to determine the educational opportunities available for their employees. This pro-active approach to ensuring that suitable programs are in place for potential employees speaks to an organization that is sensitive to the impact that it will have on the community. More to the point, it speaks to an organization that looks out for the well being of its employees in a community as well.

We envision nothing but positive effects from having UR Energy opening a facility in our county. The company is experienced in the uranium industry and has demonstrated from its initial conversations that it intends to be a solid, contributing corporate neighbor. The socio-economic impact of their work will actually improve our community, bringing new students into our schools, new spouses into our local organizations and new energy into our vocational educational programs.

Pax,
