Subject: Discussion points for the future BVPS-2 SG Conference Call (ME2316)
Attachments: Questions for SG Phone Calls - Fall 2009 BV2.doc

Ken,

Inservice inspections of steam generator (SG) tubes play a vital role in assuring SG tube integrity. A telephone conference call will be arranged to discuss the ongoing results of the SG tube inspections to be conducted during the upcoming Beaver Valley Power Station, Unit No. 2 refueling outage. This call will occur after the majority of the tubes have been inspected, but before the SG inspection activities have been completed. Attached is a list of discussion points to facilitate this call.

The Nuclear Regulatory Commission (NRC) staff will document a summary of the conference call, including any material that you provide to the NRC staff in support of the call.

Should you have any questions, please contact me.

Thanks,
Dee

Nadiyah S. Morgan
