LLEA Notification of temporary jobsite

X-Raying on a gathering system. That covers several counties. If we contact one county LLEA at the start of the job, but the job runs into more than one county. How do we know who to contact? Because we are normally in the middle of no where, therefore were not sure what county we are in that day.

Comment: Most of my customers call in for work the day before or the day of the job. So it is not possible to give a three day notice.

Shane McPherson Desert Industrial X-Ray

over

My dealings with the LLEA and the Fire department they are trained in Hazmat which deals with radioactive material. So they have some knowledge of what they are dealing with. So I think the 911 is working just fine
