Dear Chief Bladey,

Thank you for taking time to read this letter.

I am a native East Tennessean, born in Sullivan county; residing in Greene County for the past ten years.

I strongly oppose a 40 year license for Nuclear Fuel Services, Erwin, for many reasons.

1) NFS has had many mal-functions in the past.

2) The effluent from NFS goes directly into the water source for all people connected to the Greeneville water system, as well as animals and wildlife downstream

3) Health effects from radiation are not always immediate; but deadly through the course of time.

4) Monitoring of releases are only conducted by the company itself; employees, who might have reason to try to protect their jobs, either by non-reporting or altering results.

5) Environmental assessments do not address potential health hazards or worst case scenarios. — Thank you,

Sincerely, Ronald M. Pafford
