Subject: Areva Nuclear Power Plant Proposal

Dear Sirs: I write to oppose the construction of the Areva nuclear power plant. I am very concerned that the proposed plant would produce an estimated 320,000 tons of depleted uranium hexafluoride over its licensed lifetime. In view of this, and the fact that its license might well be extended, indications are that this waste would likely be stored in or near Idaho until the plant's decommissioning. Even after its removal and treatment, there is no certain disposal pathway. The Areva plant should not be licensed until regulations are in place for the environmentally safe disposal of large quantities of depleted uranium. Yours truly, Joan W. Drake, 2532 Q St, NW, Washington, DC 20007, ph. 202-338-2082.
