Subject: Comanche Peak Units 3 & 4 Draft EIS

The Draft EIS indicates that Lake Granbury would be 2 feet or more below full pool 10% of the time without units 3 & 4 and 25% of the time with the additional units. It concludes that the effect is only 15% of the time and characterizes this as a moderate impact. This is flawed, in that it is, in fact, a **250% increase** in the time that Lake Granbury would be 2 feet or more below full pool. Obviously this is a **large impact rather than moderate.**
The Final EIS **should not recommend approval** unless alternate water sources can be identified and made available.
