Charlette, NC,

General Comment

I live in NC in the kill zone of Catawba 1 &2. I used to be roommates with a guy down in GA in the death area of Plant Hatch. He let me know about the dangers of the fuel pools. Every fuel rod assembly that is able to be taken out of the pool should be put in dry cask storage immediately. They should only be stored in dry cask on site until a permanent storage solution is finally approved by the NRC, I don't expect this to be for the next few hundred years ,but hey you may surprise me. This should be done without any thought to the cost incurred by the nuclear companies. They will just raise rates and pass the costs on to consumers anyway. But make sure that when you are singing the praises of the low costs of nuclear energy you put the cost of moving spent fuel to dry cask storage twice (for the moveable and non movable type casks) then moving it to a permanent facility , then guarding it for the next billion years. That will give the public a better idea of the real cost of nuclear energy.

Van,

Attached for docketing is a comment from Will Haskett on PRM-50-96 (76 FR 26223) that I received via the regulations.gov website on 7/18/11.

Thanks,
Carol
