Photo 5. Most of the agricultural land in 2007 was fallow and vegetated by old field plant communities.

Photo 6. Some of the agricultural fields that were fallow in 2007 and in old-field cover were planted in corn in 2008.

Photo 7. Palustrine forested wetlands also generally consisted of young- to medium-aged trees in the overstory and a dense cover of shrubs in the understory (background).

Photo 8. Groundwater seeps were common throughout the forested wetlands.

Photo 9. Palustrine forested wetlands along Walker Run.

Photo 10. Palustrine scrub/shrub wetlands vegetated by alders.
