Subject:	Acceptance Review Re: Nine Mile Point 1 (NMPNS) License Amendment Request - Average Power Range Instrumentation System Operability Requirements - TS 3.6.2 (TAC NO. ME5010)
Date:	Friday, February 18, 2011 9:17:00 AM

Dennis,

The purpose of this e-mail is to provide the results of the NRC staff's acceptance review of the subject NMPNS application dated November 2, 2010 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML103130037). The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review was also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

By letter dated January 5, 2011, (ADAMS Accession No. ML103610334), the NRC staff identified an informational need that was necessary to enable the staff to make an independent assessment regarding the acceptability of the proposed amendment in terms of regulatory requirements and the protection of public health and safety and the environment. By letter dated January 27, 2011 (ADAMS Accession No. ML110400115), NMPNS provided a supplement to its submittal.

The NRC staff has found the supplement responsive to the staff's cited information needs, and concludes that the application with the supplemental information provide technical information in sufficient detail to enable the staff to proceed with its detailed technical review. If additional information is needed for the NRC staff to complete its technical review, you will be advised by separate communication/correspondence.

This message will be added to ADAMS as an official agency record. If you have any questions, please contact me.

Rich Guzman
