Regarding South Texas Project Units 1&2 Relicensing,
NRC-2010-0375 Docket Nos. 50-498; 50-499

The re-licensing of these two reactors for an additional twenty years should be halted for safety reasons.

There are safer, cleaner alternative ways to generate the same power that exist today and should be used. Studies have found that energy efficency and renewable energy sources, which are abundant in Texas, could replace the power generated by these two old reactors.

There is no adequate solution for radioactive waste, so it makes no sense to continue generating more.

Sincerely,
Peggy Cravens
